FACTSHEET #18:

Powerful Chinking This E Thir

This Energy Factsheet is part of a series developed by Powerful Thinking with our partners. To see the full series online go to: www.**powerful-thinking.org.uk/resources/fact-sheets**

GETTING SMART WITH ENERGY FOR STAKEHOLDERS

Photo credit: Shambala Festival - Lousie Roberts

About this Factsheet

This factsheet is intended to give you a some copy to work with when beginning to communicate about energy with your stakeholders. Please copy and paste as you wish to create a letter or communique to share your intentions on energy management with companies, staff or freelancers. We have found that sending this to stakeholders along with Factsheet #7 – Roles at a Glance can be very useful.

Title: e.g. Help [Festival Name] to [your aim – e.g. Get Smart with Energy].

Energy is usually one of the second most significant contributors to environmental impacts – i.e. carbon emissions – caused by a festival (after travel & transport).

Research by Powerful Thinking has shown that energy management at UK outdoor events is typically wasteful, leading to unnecessary fuel use and emissions.1 The most common reason for this is not having an accurate understanding of power requirements in advance, creating uncertainty and the need for larger generators than actually required.

As part of our commitment to reducing environmental impacts, we aim to manage energy more smartly onsite. We can be achieve this by reducing energy demand, understanding better our energy needs, designing our systems more efficiently, and integrating renewable energy where possible.

To achieve this, almost everyone involved with the festival can play a valuable role. Please check out a factsheet written by Powerful Thinking that details what people in various roles can contribute: **#7 – Roles at a Glance**.

This year we will be working closely with the power supplier(s) to gain more accurate power requirements form everyone who uses power in advance. If you need some help working out what power you actually really need, there are factsheets available online that can help you e.g. **Factsheet #19 – Working Out Energy Requirements for Concessions**.

There are several things you can do to help us this year:

- Work out your energy requirements accurately in advance.
- Switch off lights and equipment when not in use.
- Use low-energy equipment wherever possible.

Thanks in advance for getting involved.

To read the full Powerful Thinking Guide 2017, a comprehensive guide to Smart Energy for Festivals, which includes the complete series of 21 factsheets plus case studies of festivals who have successfully implemented the ideas and technology suggested go to: <u>http://www.powerful-thinking.org.uk/resources/powerful-thinking-guide-2017</u>
